Peer reviewers of *The Radiographer*

Reviewers play an essential role in producing a quality journal. They make judgements on the scientific merit, the educational significance of the topic and the readability of the manuscript. They often make recommendations to the author(s) on how to further enhance the quality of their manuscript. These recommendations are essential in assisting the editors make decisions on whether to accept or reject a manuscript.

The editors allocate each manuscript for peer review to two experts in the same field as the topic in the manuscript. *The Radiographer*, where possible, has a double blind peer review policy where both reviewers and authors remain unknown to each other.

In 2011, there were many contributors to the peer review of manuscripts in *The Radiographer*. Advice was also sought from colleagues with expertise beyond that of the skills and knowledge of the editors and the reviewers.

I would like to express my sincere gratitude for the many hours spent reviewing manuscripts for *The Radiographer*. As a reviewer, I know that it is a rewarding experience.

I thank the following peer reviewers and advisers of *The Radiographer* from November 2010 to October 2011.
